Home Assignment 2: LLM Model Switching

Use the user-story-to-tests-updated-ui application and implement a model-switching option for the following LLM providers:

- 1.OpenAI
- 2.Anthropic
- 3.Google Gemini

Users should be able to select any provider from the UI and generate test cases using the selected model.

Open the below path in VS code

E:\Vidhya_Assignment link\Sep 12th\Home Assignment\Assignment 2\user-story-to-tests-updated-ui\user-story-to-tests-updated-ui

Update Groq API key if not available

Type 'npm install'

Type 'npm run dev'

Give the below prompt in copilot within VS code

Act as a Senior Full-Stack Architect and AI Engineer.

I already have a working application named user-story-to-tests-updated-ui that generates test cases from user stories.

I want to enhance the existing application by implementing LLM provider switching so users can choose which AI model generates the test cases.

Objective

Implement a Model Selection feature that supports these LLM providers:

OpenAI

Anthropic

Google Gemini

The user should be able to select a provider from the UI before clicking Generate Test Cases, and the application must use the selected provider to generate the output.

Functional Requirements

UI Changes

Add a new section called LLM Provider.

Example UI:

LLM Provider

OpenAI

GPT Models

Anthropic

Claude Models

Google Gemini

Gemini Models

Requirements:

Default selection: OpenAI

Selected provider should remain highlighted.

Selection should persist during the session.

Disable Generate button while generation is running.

Show which provider is currently generating.

Enter Story Title, Description, Acceptance Criteria of any user story. Select any model and click on Generate Test cases

Turn user stories into comprehensive, structured test cases in seconds.

Story Title *

Search Healthcare Providers Using Multiple Search Criteria

Description

or patient referral purposes.

The search should allow users to enter different combinations of search criteria and display matching provider records in a paginated results table. Users should also be able to reset the search criteria and sort the search results.

Acceptance Criteria *

Search with Single Criteria

Given the user is on the Provider Search page,

When the user enters a valid value in any one search field (e.g., Provider Name or NPI) and clicks Search,
